Protect Your Joint and Bone for Greater Flexibility

Musculoskeletal disorders including arthritis are common among older adults and athletes or active individuals. Musculoskeletal pain can affect your bones, muscles, ligaments, tendons and nerves. A lifetime of standing, walking and exercising takes a toll on your cartilage and can cause degeneration, which results in chronic joint pain and inflammation.

Inflammation can be caused by overactive lifestyles such as hectic working conditions, rough sport activities, injuries, imbalance food intake, some concomitant diseases and many more. All these trigger our MMP-3 and 5-LOX enzymes which is actively destroying our cartilage.

What is Human Cartilage Made of ?

Cartilage is made of specialized cells called chondrocytes. These chondrocytes produce large amounts of extracellular matrix composed of glycosaminoglycans, collagen fibres, proteoglycan and elastin fibres. There are no blood vessels in cartilage to supply the chondrocytes with nutrients.

Cartilage is a flexible connective that keeps joint motion fluid by coating the surface of the bones in our joints and by cushioning bones against impact.

Nutriva® EgctoFlex is a unique, natural and effective joint formula that **provides you pain relief as early as 5 days with no side effects for long term consumption.** It's the latest innovation products that consisting eggshell membrane (OVOMET®) and eggshell (OVOMET®) imported from Spain.

The information is intended as reference for professional use, strictly for internal circulation.

Ovomet® - 100% Natural Eggshell Membrane

Ovomet® is a patented ingredient from Spain, obtained using a patented chemical-free process and clinically proven to support joint health.

Health Canada Authority has approved few claims for Ovomet® :

- Helps to support joint health by reducing joint pain and stiffness.
- Helps to reduce joint pain in knee osteoarthritis as early as 5 days.

The synergistic compositions of Ovomet® are few types of collagens, elastin, naturally occurred glucosamine, hyaluronic acid (HA), chondroitin sulfate, dermatan sulfate, keratin, lysozyme and over 500 different protein amino acids.

Due to its high contents of proteins and significant quantities of glucosamine, chondroitin sulfate and hyaluronic acid, the eggshell membrane provides joints with the building blocks needed to **REBUILD** the cartilage.

Most of the chemical or synthetic joint cartilage formulas are having the limitation and challenge on **ABSORPTION** that cause the body to use little or less amount of nutrients to regenerate the cartilage.

Besides, most of them are from animal source and **not vegetarian friendly**. While **Ovomet®** in **Nutriva® EggoFlex** is derived from chicken eggs through a patented hydrolysis process and water soluble.

Strengthen Your Bone with **OVOCET**[®]

Calcium carbonate obtained from eggshell is a natural and environment friendly form of dietary calcium essential for maintaining bone health. Ovocet[®] is a highly available source of calcium that combines calcium carbonate with transport proteins for a maximum availability up to 98% in comparison to other calcium source. It also contains trace elements such as strontium, which can increase bone formation and prevent bone loss, in the absence of heavy metals.

Calcium is not made in the body - it must be absorbed from the foods we eat. To effectively absorb calcium from food, our bodies need Vitamin D. If we do not have enough calcium in our diets to keep our bodies functioning, calcium is removed from where it is stored in our bones.
